# Medi-chal Project
# March 16$^{\text{th}}$ meeting

## Adrien Pavao

Firstly, we discussed different meta-features that could describe a dataset. You can find it in the file **meta_features.pdf** in the *documents* folder. Those meta-features and visualization of a dataset will be implemented in the Data Manager program and in the Identity Card notebook.

Then, Diviyan presented its paper *"SAM: Structural Agnostic Model, Causal Discovery and Penalized Adversarial Learning"*. You can find it here : `https://arxiv.org/abs/1803.04929`.
